

Why more than 80%cut ? and “the Realizability in your life” !!!.2014/6/22

<http://www.777true.net/Life-Assurance-by-National-Strategy-in-coming-climate-WAR-TIME.pdf>

(1) **The unique and only salvation policy “more than 80%CO2 cut” is highly possible.**

Tough life of only 50 years long(**climate war time era**) could save this deadly world<(2)(c)>.

This is **the emergent and decisive duty of global people** who had do fatal errors in past.

In **coming climate “war time”**,our basic life must be limited for **eating & sleeping!!**.

The energy for cooking(1.2%) and home heating(3.7%) is mere 4.9% in Japan 2009..

Note above value is that of **extravagant way of life** almost without solar and wind powers !!!

The trend of energy supplying and consumption (Japanese 2009)...1950 > 0.3x10¹⁹J/y?

<http://www.enecho.meti.go.jp/topics/hakusho/2011energyhtml/2-1-2.html>

Total(100%)	Industry	transport=23.6%	service	home
14394x10 ¹⁵ J/y	42.8%	Rail Road=0.05%!!(7.0x10 ¹⁵ J)	19.5%	14.8%

Certainly,we never fully can stop industry,service,transport, but **minimum necessary**.Those main factors may be **agriculture & minimum transport** for indispensable goods for regions **Imagine the way of life in 1950(1/5 energy)**,when people could manage life by anyhow.

1/5 energy era were certainly poorer than now,however not so tough one.Also Imagine **new energy technology** of solar and wind etc.Now author could not exactly verify the possibility, however it never be impossible, **if you could imagine climate hell possibility**. The exact proof need **big simulation calculation by economy experts** with necessary data(your task!!)

*rail road=0,05% ?,is it electrical energy or the primitive oil energy ??

(2) **The max problem now is none will do it by innocent on decisive 80% cut necessity.**

(a) By anyhow, we could not be saved by recovering the global temperature into now. This is reconstruction of global temperature record (1860~2010) proving **simulation reliability !!!**.

<http://www.777true.net/Definition-on-Radiative-Forcing.pdf>

(b) **Stopping CO2 concentration rise** needs about **50% cut**, even which could not be salvation. Because temperature would have been rising only, but not turning down.

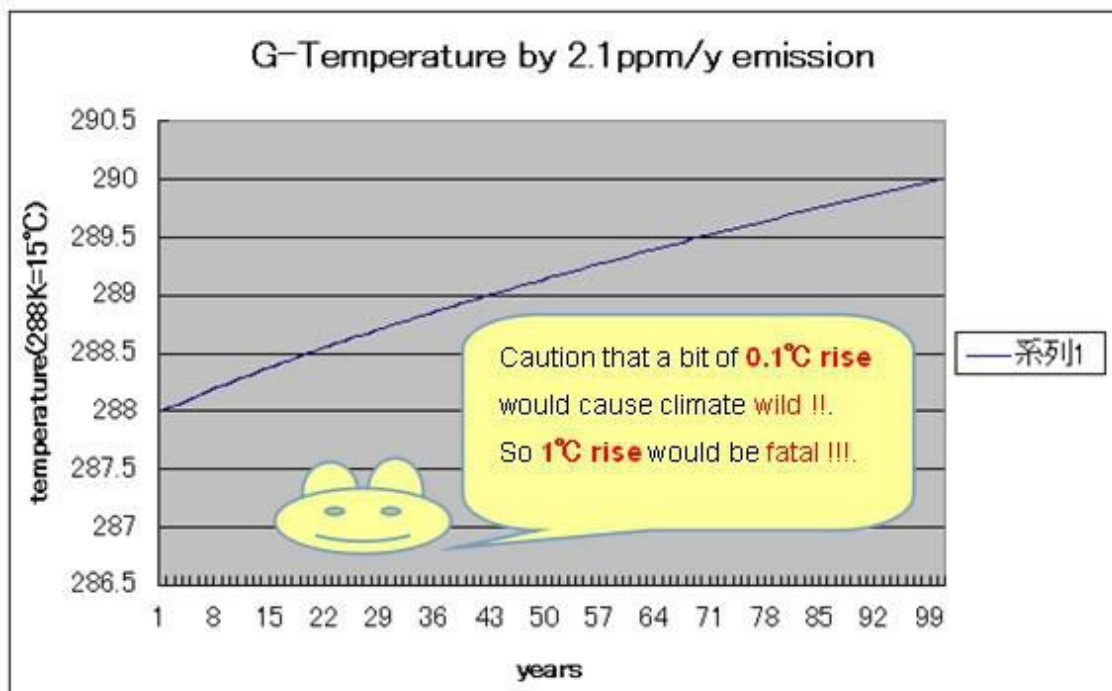

(c) **Only by more than 80% cut**, temperature could turn to down, which is decisively necessary for the salvation with **minimum climate damage**.

Then **Arctic Cooling** must be implemented simultaneously, which is **global emergent task**.
<http://www.777true.net/How-to-Make-Clouds-for-Intercept-solar-heat-in-Arctic.pdf>

(d) Prediction on the current emission trend(2.1ppm/y),which never be salvation at all.

(e) IPCC has nothing simulation on temperature recovering to now state.

Also this is fatal. By temperature rising only, it is too evident that globe becomes full disastrous toward extinction.

IPCC Temperature Prediction with emission scenarios

<http://www.skepticalscience.com/ipcc-overestimate-global-warming.htm>

<http://www.skepticalscience.com/iea-co2-emissions-update-2010.html>

(3) **For making climate war, General Head Quater (GHQ) must decisively necessary.**

Most of people must become soldiers with international GHQ (WMF).

WMF duty = management on
(a) Food support & Carbon Police Activity
(b) Forestization, Geo-Engineering,
(c) climate observation, prediction, the bulletin,
(d) international dispute settlement, international migration support

Instead impossible IPCC, we must make alternative function toward global policy actions.

http://www.777true.net/The-fatal-failure-of-IPCC-climatology_Why-is-IPCC-impossible.pdf

How to reconstruct WG=working group changeable with the wrong IPCC.

I : WG of Climate Science Conclusions and the Technical Supporting on II - III.

http://www.777true.net/This-is-the-most-emergent-problem-of-to-live_or-not-to-live.pdf

(1) **Arctic Emergency**, by anyhow, scientists emergently must **declare decisive facts!!**

(2) management on **Carbon Emission** with temperature monitoring .

(3) Climate monitoring and prediction for **Technical Supporting on II - III**

II : WG of Geo-Engineering, non-carbon Energy Design and the Management.

http://www.777true.net/Part_6_non-carbon-Energy-Engineering.pdf

(1) **Arctic Cooling Design and the Implementation Management**

(2) **non-carbon Energy Development and the Management.**

(3) **carbon energy rationing management.**

III : WG of Policy Design on People's Life Assurance and the Management.

<http://www.777true.net/Life-Assurance-by-National-Strategy-in-coming-climate-WAR-TIME.pdf>

(1) **Foods, Energy, Housing the Minimum Life assurance Design and Management.**

(2) **Planned Economy** (demand and supply) and Employment Design and the Management.

(3) **Culture and Health Care Design and Management**

(4) **Military-Police-Judaical Design and Management.**

(5) **Financial Design and Management.**

Certainly this is big problem, but must emergently find alternative and effective solution.

This is also another big problem for all of you !!!.
